

Interconnecting in IP Networks

IPC_120d | On-Demand | Transport | ⚙️

Course Duration: 1.5 hours

As the communications industry transitions to wireless and wireline converged networks to support voice, video, data and mobile services over IP networks, a solid understanding of IPv4 and IPv6 networking along with their use for inter-networking is a must for all telecom professionals. As the services and applications of wireless networks continue to expand, the backbone must evolve to support them. Multi-Protocol Label Switching (MPLS) is designed to make the backbone fast, scalable and manageable, and capable of carrying heavy traffic, supporting QoS. This course presents a technical overview including a discussion on the architecture of MPLS, the components of the MPLS network and the supporting protocols required for MPLS.

Intended Audience

This course is intended for anyone seeking a basic level overview of the MPLS and IP interconnecting architectures.

Objectives

After completing this course, the student will be able to:

- Describe the motivation behind MPLS
- State the role of MPLS in the convergence of networks
- List key applications of MPLS
- Sketch the architecture of MPLS
- Describe the important components and operations of MPLS
- Describe how MPLS is used to set up layer 3 and layer 2 VPNs

Course Prerequisites

No Prerequisites

Outline

1. Why MPLS?
 - 1.1 Advantages of MPLS
 - 1.2 New applications
2. MPLS Networks
 - 2.1 MPLS domain
 - 2.2 Label edge router
 - 2.3 Label switch router
3. MPLS Terminology
 - 3.1 Label Switched Paths (LSP)
 - 3.2 Forward Equivalence Class (FEC)
 - 3.3 Structure of a label
4. Packet Forwarding Along LSPs
 - 4.1 Label Forwarding Information Base (LFIB)
 - 4.2 Packet forwarding along LSPs
 - 4.3 Label stacking
5. MPLS and Virtual Private Networks
 - 5.1 VPNs support in MPLS
 - 5.2 Layer 3 and Layer 2 VPNs establishment in MPLS
 - 5.3 Label stacking and VPNs
 - 5.4 MPLS based L2 VPN solutions
